Frameworks and Tools - JQuery, Bootstrap, Jira, Team Foundation Server, ASP .Net Web Forms, MVC, RESTful API, LINQ, Android Dev, TSQL, SQL Server, ReactJS, Flask, NodeJS, Sass, AJAX

Experience

SafeCode/ R&D Software Developer

JAN 2019 - PRESENT, South Melbourne

- Developed a portal for clients' customers to drastically increase processing speed and ease
- Routinely developed and maintained features, using the **Microsoft ASP.NET Stack**, for financial-based softwares
- Undergone financial training to have a better understanding of how the user will use and interact with the system
- Created a **RESTful WebAPI** using **oAuth2** for security for a mobile application
- Generated numerous **reports**, through manipulation of data from the **SQL Server**, to fit customer's diverse requirements
- Consistently engaging with clients through channels of support
- Debugging and understanding **legacy code/frameworks (VB, Aquarium)** that were written 10+ years ago and being able to replace or maintain that code with minimum disruptions
- Mentoring and training new junior developers by planning out their day-day operations, teaching them how different products and systems operate and answering any queries they pose
- Demonstrated versatility by being able to move between projects and teams and adapt to the culture and codebase
